

KEEP HYDRO PUBLIC

We call on the government to delay its decision on privatizing any part of Ontario's hydro system until a province-wide public consultation process has been conducted.

- there is no clear evidence supporting the idea that a privately operated utility will be able to deliver costs and reliability comparable to the present, publicly-operated utility;
- despite reassurances from government, private control will inevitably reduce government oversight and accountability for this critical service;
- this decision will have far-reaching consequences for generations to come, is being developed behind closed doors, with no meaningful opportunity for public input.

We urge all Members of Provincial Parliament to support this call for public consultations.
